

# Allter-Tape HTPE™

PRODUCT DATA SHEET

## **Selection and Specification Data**

**Generic Type** 

A self-adhesive pressure sensitive stabilized polyethylene tape with a premium grade butyl bituminous adhesive.

**Product Description** 

Allter-Tape HTPE™ is a cross laminated HDPE cold applied tape designed to be used as a high-performance mechanical protection on top of our corrosion barrier systems Visco-Rite™ 95 and 95HB for immersed and buried services up to continuous 95°C. This material provides good abrasion, impact and indentation resistance, and is also resistant to chemicals like acids and alkalis. Application examples are buried pipelines, girth-weld joints, elbows, tees, reducers, bends, flanges, insulated pipelines etc. found in various industries such as in petrochemical facilities, chemical plants, Offshore, power plants, refineries etc.

#### **Features**

- Complies to ISO 21809-3: 2016 in combination with Visco-Rite™95HB
- Can be applied by hand or Wrapping machine
- Excellent mechanical properties
- Very good impact and indentation resistance
- Very good resistance to aging at maximum operating temperature
- Excellent suitable for hot climates
- Excellent adhesion to itself
- Service temperature from -40 up to +95°C
- Environmentally safe product/safe to use

Color Black

Finish NA

Primer NR

Dry Film Thickness

1016 micron (40mils) nominal

# **Allter-Tape HTPE™**

Volume Solids 100%

Theoretical Coverage Rate

3.0m<sup>2</sup> per 100mm. x 30m. roll at 1016 micron (40mils) DFT ex. 50% overlap

VOC 0 g/l (0.00 lbs/gal)

Temperature Resistance

from -40 up to +95°C

**Topcoats** No topcoat required.

# **Substrate and Surface Preparation**

General Remove all dirt, grease, and any other contaminants that can reduce adhesion

according SSPC-SP1 solvent cleaning.

# **Mixing and Thinning**

Mixing No mixing. Ready to use material.

Thinning No thinning. Ready to use material.

### **Application Equipment**

General This material can be simply applied by hand or (semi) automated equipment.

**Application** Unroll a small part of tape and stick the material onto the specific Visco-Rite.

Applying the material with tension and press the material firmly onto the substrate to avoid air entrapment. Application must start with two (2) complete circumferential wraps around the protected object. The material can be applied spiral-wrap or cigarette-wrap with a minimum side by side overlap of 50%. When a new roll of material is used, a minimum overlap of 50mm. (2") to the previous roll is recommended, followed by one (1) complete circumferential wrap around the protected object, before proceeding further wrapping.

When finishing the application, finish with one (1) complete circumferential wrap

around the protected object.
